

## CLIKCARD SERIES

**convenient, reliable  
access solution**

The remote control for telephone entry and access control system users. No more cards to scan or codes to enter, CLIKcard provides one-touch, secure access for gated entrances in excess of 200 feet away. Transmitters can be attached to your car visor or carried in your pocket for convenient access through gates, garage doors and secured entrances. CLIKcard works with Infinity Series telephone entry systems or any Sentex® access control system.

CLIKcard-SA is a stand-alone system that provides the ease of one-touch entry without requiring a telephone entry or access control system. Designed to work with a large variety of systems, it supports Wiegand 26 or 30-bit formats. The system is programmed using a built-in keypad with visual display, so a computer is not required. Built-in control features include 7 programmable time zones, automatic door lock/unlock schedules, 3 relays, capacity for up to 8,000 transmitters and printer output for running real-time transaction reports.

# CLIKcard-SA Features

## time zones

The CLIKcard-SA can manage up to 7 different time zones, boosting system functionality to accommodate such commands as automatic door or gate unlock, or restricted personnel access. Six of the time zones have 2 stop and start intervals each with the seventh time zone "0" as the system's default for full access.

## automatic lock/unlock schedules

Automatic lock/unlock schedules allow you to program the system to unlock and then re-lock at separate scheduled times. For example, you can leave certain entrances open during business hours, allowing freedom of movement for vehicles, employees and customers.

## holiday programming

Up to 10 time zones can be defined to facilitate a year's worth of holidays that will override the standard time zone programmed into the system.

## programmable relay times

The system's 3 relays can be programmed to activate for a pre-determined time from 2 to 250 seconds, to allow visitor access. The default setting is 2 seconds.

## programming display

A 7-segment LED display and keypad are included inside the unit to ensure that programming of the unit is simple, clear and concise.

## printer output

A printer can be attached, utilizing an RS422 connection, to the unit producing a hard copy of all system activities. This real-time transaction report includes each event and its date and time.

## internal date clock

In support of the 7 time zones and the automatic lock/unlock schedules, a date and time clock is built into the CLIKcard-SA. This clock also adjusts automatically for time changes related to daylight savings and leap year.

## non-volatile memory

All programmed information will be retained in the memory even in the event of a power disruption. This allows the system to be fully functional as soon as power is restored.

## lightning protection

Physical inputs and power connections contain some protection against typical voltage spikes. However, in an area where lightning is prevalent, external surge suppressors should be used to minimize any power damage to the system.

## vandal-resistant design

The CLIKcard-SA receiver unit's rugged design can be mounted in a guardhouse or on a pedestal. The electronics are protected with a faceplate made of stainless steel and an enclosure that is weather-resistant.

## password protection

The CLIKcard-SA can be customized with a 6-digit numerical password to ensure the security of the programmed database information.

## bulk transmitter entry

To minimize the initial loading of the system, CLIKcard-SA allows transmitters to be added in groups with the same time zone in one easy step. After they have been added, you may subsequently void and change each transmitter individually.

# SPECIFICATIONS

## CAPACITY

8,000

## DIMENSIONS

Receiver –  
9.4" H x 8.4" W x 3.0" D

## POWER

12 VAC or 13.5 VDC

## TRANSMITTER

1 & 2 Button Visor Style  
1 & 2 Button Keychain Style

## FREQUENCY

295MHz or 303MHz

## BIT FORMAT

26 or 30

## WARRANTY

One Year
