The **Eagle-2000** series is the premiere line of commercial sliding gate operators for Eagle Access Controls. The **Eagle-2000** combines smooth and quiet operation with the power and durability necessary for commercial applications. All of the models within this series are manufactured in the U.S.A. with dedication to safety, precision performance, and highly durable construction. Eagle Access Controls uses the latest in technology to provide you with the safest and most efficient operator for your money. For starters, there is the **HP Eagle-2000-FSF** or **FSC** models. These operators use either the Fail Safe system (which in case of a power outage allows you to easily push open the gate manually) or the Fail Secure system (which utilizes a supplied crank to open the gate in the event of a power failure). Both models are strong and dependable operators that are ideally suited for heavy-duty commercial and industrial applications.
